

Zebronics Viper Driver installation guide

Note: If you have not connected the webcam or installed any software from the bundled CD then start from step 4.

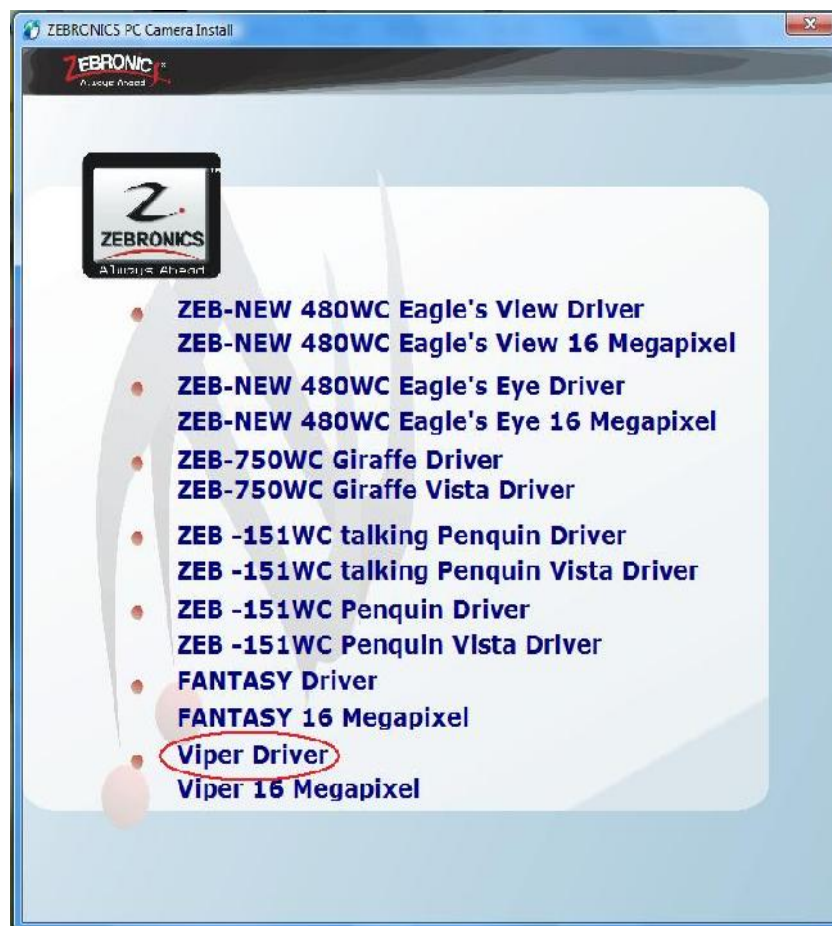

Step 1: Please disconnect the webcam if you have already connect it to the USB slot of computer/laptop.

Step 2: Uninstall all the software/driver which you have already installed from the drive CD of the webcam from Control panel/Add remove programs.

Step 3: Restart your computer.

Step 4: Insert the driver CD which is bundled with the webcam.

Step 5: If autorun program is started you will get a window like this(Pic 1). If its doesn't open please click on my computer and right click on the CD/DVD drive and click on explore option. And open the file autorun.exe. As shown in Pic 2.

Pic 2

Step 6: Then click on the “Viper Driver” As shown in Pic 1. The you will get a new window shown in Pic 3. Click next on that.

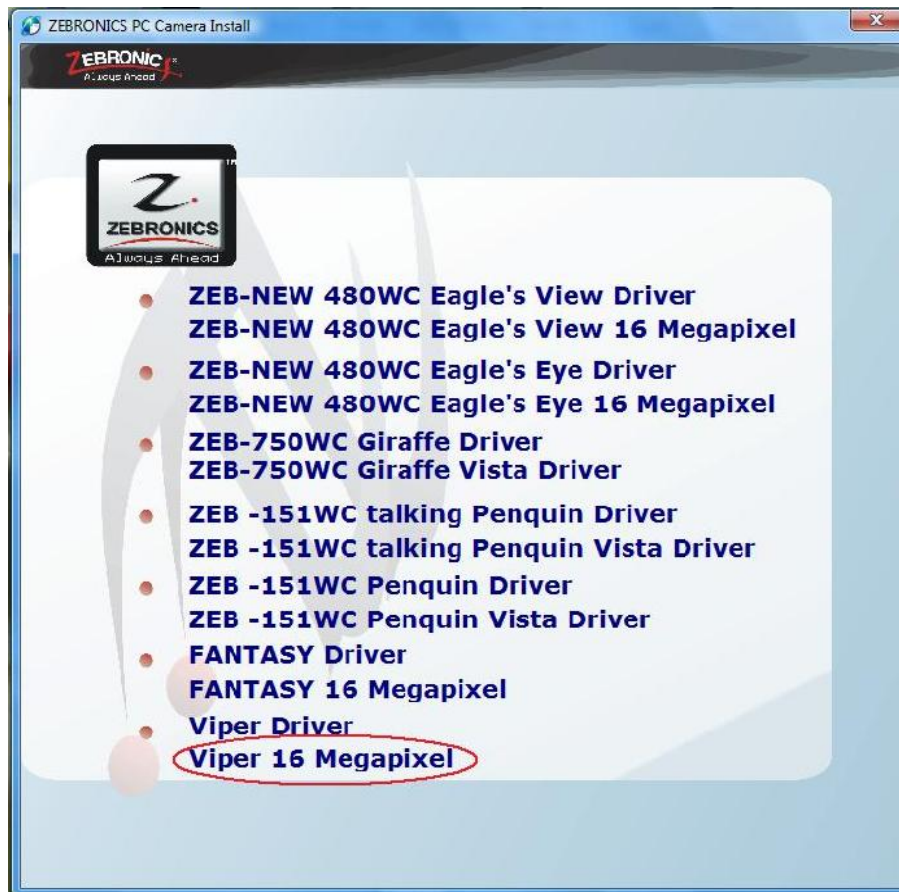

Pic 3

Step 7: Wait for the driver to install and click Finish as shown in pic 4.

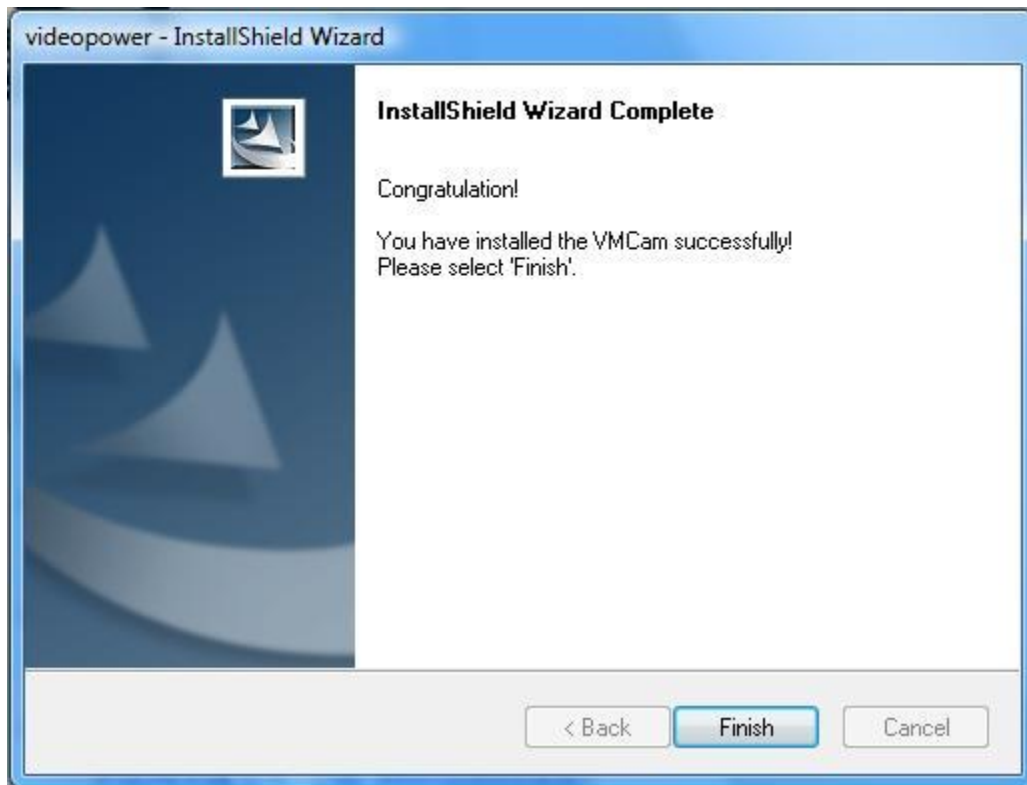

Pic 4

Step 8: Now go back to the first window as shown in Pic 1 and click on “Viper 16 Megapixel”. As shown in pic 5.

Pic 5

Step 11: After the installation, you will get a window like Pic 6, just click on finish and restart your computer.

Pic 6

Step 12: After restarting your computer connect the webcam to one of the USB slots. After connecting the webcam, your computer will detect a new hardware. Let it install the drive, after that you will get a message that new hardware is installed and ready to use. Then click on the application “amcap”, which should be there on the desktop.
