SOFTWARE FEATURES:

Connection
To access the advanced Windows software, ensure your Mouse is connected to your Windows PC.

Key Remapping & Macros
Use the Windows application to remap any key and configure macro function or secondary functions perfectly optimized for gaming, productivity, or both.

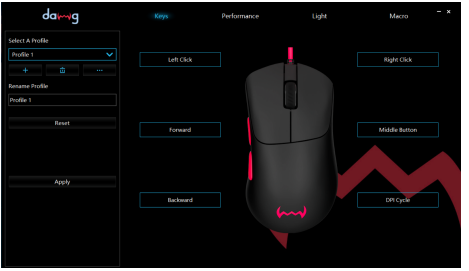

Profile Management
Effortlessly save distinct configurations whether gaming, work, or media as separate profiles then switch between them instantly via the software for optimized performance at the touch of a button.

Slay 25 Software Installation:

Download and install the Slay 25 software from the link below to unlock the full suite of settings and features for your keyboard.

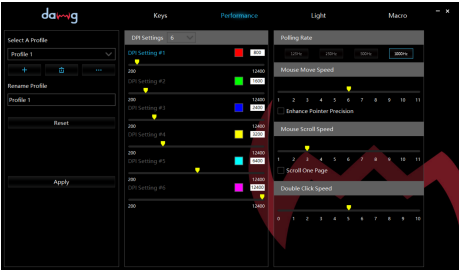

daWg Slay 25 Software

Now open the software and you can notice the software interface as shown

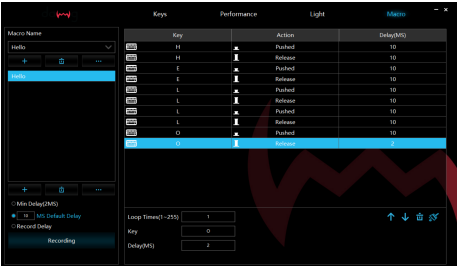

You can customize key functions and assign new actions to any keys (Except Left Click). Once you're done configuring, be sure to save your changes. Then, create and name profiles. each tailored with its own set of key functions for easy switching whenever your workflow or activity changes.

Mouse Configuration:

You can customize No of DPI Level, DPI Speed, Polling Rate & Mouse Sleep timing. Once you're done configuring, it will auto save your changes. Then, create and name 4 profiles Max. each tailored with its own set of key functions for easy switching whenever your workflow or activity changes.

Marco Function:
Macro Function allows you to combine a sequence of keystrokes into a single key press, so one key can execute a custom key combination.

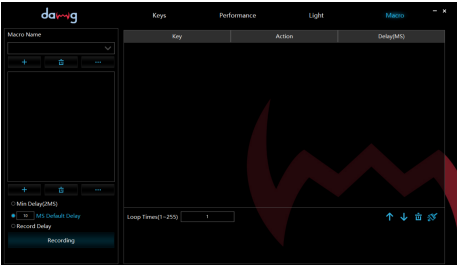

Macro Edit Panel

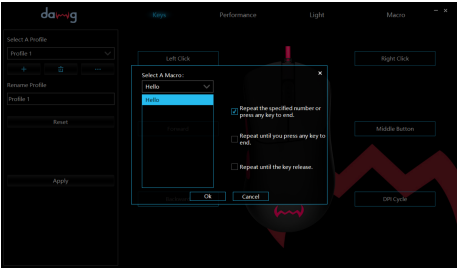

Using the Macro Function

1. Click the **New** button to start creating a macro.
2. Hit the **Start Recording** button and type the desired sequence.

3. Once finished, click **Stop Recording**, then the Macro will save automatically.

4. Open the **Mouse Key** section and assign your macro to a key.
5. In the software, select the **Macro** tab, load the macro from the saved list, then click **Save** again.

This ensures your custom key sequences are properly recorded, assigned, and ready to use whenever you switch profiles.
